SEB Muenberg. There are 78 producing wells at
SEB Muenberg. Twenty-one wells are pumped, five are eruptive and
the remaining 52 wells produce with the help of a gas lift. Four deep
drill rigs are working in the direction of the village of Rabensburg
north of Hohenau, an area which has already been tested with counter-
drillings.

A Soviet controller from SMV Moscow is working at Anshberg, and it is believed that he will remain for two more months.

oil. Neusiedl. All the wells at Neusiedl must be pumped or worked with the help of a gas lift. Allegedly all 204 producing wells need frequent repairs. Since production cannot be increased, a reduction in personnel has taken place. There are not enough men to supervise all wells properly.

25 YEAR RE-REVIEW
